Math 150 Week in Review 8 Problem Set

1. (a) Express $200^\circ$ in radians. 
   (b) Express $\frac{5\pi}{4}$ radians in degrees.

2. An arc of length 6 ft subtends a central angle of $20^\circ$. What is the radius of this circle?

3. In a pizza with diameter 16 in, the area of a certain piece is 24 in$^2$. What is the length of the crust on this piece?

4. If a record player makes 8 revolutions every 5 seconds, what is the angular speed of the player?
5. A car tire has a radius of 12 inches. The tire is rotating at a rate of 700 rpm. What is the speed of the car? (What is the linear speed of the tire?)

6. Find coterminal angles between $0^\circ$ and $360^\circ$ or $0$ and $2\pi$ for the following.
   
   (a) $-680^\circ$
   
   (b) $\frac{43\pi}{7}$

7. A water slide at a water park forms an angle of elevation of $10^\circ$ from the water to the top of the slide. The endpoint of the slide is 110 ft horizontally from the start of the slide.

   (a) How long is the slide?

   (b) How high does the slide start?
8. An ant is sitting between 2 towers. One tower is 100 ft tall and the other is 150 ft tall. The angle of depression from the 100 ft tower to the ant is $32^\circ$. The angle of elevation from the ant to the top of the 150 ft tower is $43^\circ$. How far apart are the towers?

9. Find the reference angle for the given angle and then evaluate the trig function exactly.

(a) $\csc(-315^\circ)$

(b) $\sec\frac{4\pi}{3}$

(c) $\tan 690^\circ$
10. Given that \( \csc \theta = \frac{7}{4} \) and that \( \cot \theta < 0 \), find the other trig functions for \( \theta \).

11. Solve the following triangles.

   (a) \( A = 90^\circ, B = 15^\circ, c = 4 \)

   (b) \( C = 42^\circ, b = 19, c = 22 \)
(c) $A = 15^\circ, C = 110^\circ, b = 10$

(d) $B = 37^\circ, a = 12, b = 9$
12. How many triangles exist that satisfy the following?

(a) \( A = 65^\circ, a = 60, c = 75 \)

(b) \( B = 107^\circ, c = 21, b = 15 \)

(c) \( C = 99^\circ, a = 51, c = 61 \)

13. A ski lift takes people to the top of a mountain. The pickup point for the ski lift is 5000 ft from the base of the mountain. The angle of elevation from the pickup point to the top of the mountain is 22° and the angle of elevation from the base of the mountain to the top of the mountain is 64°.

(a) What is the distance the ski lift travels?

(b) What is the vertical height of the mountain?
